

CNIT 255 – Programming for the Internet

HW 7 / Lab 7

Use the previous HW 6 / Lab 6 master page application and add the following:

- On the master page created in the previous Lab, create a section on the left side of the master page with a Menu Site Navigation control.
 - The menu control should include a top level with menu items Shopping, Projects, Service and Support, and About Us.
 - The Shopping menu item should expand to include links to the order web page, cart web page, and a new checkout page.
 - The Projects menu item should expand to include links to a costumes page, animated props page, and a static props page.
 - The Service and Support menu item should expand to include links to a customer service page, and a product support page.
 - The About Us menu item should go directly to a About Us page.
- Add content pages for costumes, animated props, static props, customer service, product support, site map, about us, and checkout. These content pages should have no content, but say they are under construction.
- On the Master Page add a SiteMapPath control to the div element that contains the ContentPlaceHolder.
- In the Site Map content page create a TreeView control that navigates the site to all the page.
- In the Master Page create a theme for the site that includes skins for buttons, textboxes, drop-down boxes, list-boxes, labels, and validators.

Submit all code files for the application and a pdf of the screen shot of the displayed web page after running a future value from the ASP.NET application in a zip file. Submit via the blackboard learn system (if there are problems with the Blackboard Learn system, then submit via email). The file should be named "CNIT255_Lab7_" & your name.

See due date for this assignment on Blackboard.
